PROFILE

Self-taught web developer with expertise in building responsive and user-centric eCommerce websites. Skilled in HTML, CSS, JavaScript, and modern frameworks like Vue.js and Nuxt 3, with hands-on experience in Shopify API integration and custom storefront development. Passionate about continuous learning and delivering innovative solutions to enhance user experience.

SKILLS

Shopify/Liquid Development

Expertise in developing and customizing Shopify stores, including Shopify theme development, Liquid templating, and API integration. Proficient in creating custom Shopify apps to extend platform functionality.

CSS/JS

Advanced skills in CSS and modern JavaScript (ES6+), with a passion for creativity and design. Committed to creating pixel-perfect, responsive web pages that blend functionality with aesthetic appeal.

Shopify Apps

Experienced in integrating and customizing Shopify apps to enhance store functionality and user experience, including configuring third-party apps and developing custom solutions.

Git/GitHub - Version Control

Experienced in using Git and GitHub for version control, managing codebases, collaborating with teams, and maintaining project integrity across different stages of development.

API Integration

Adept at integrating and consuming JSON APIs to enhance web application functionality, connect external services, and extend the capabilities of Shopify stores.

Clean, Readable Code

Strong commitment to writing well-structured, easily maintainable code with a meticulous attention to detail. Ensures code quality aligns with industry best practices and enhances long-term project sustainability.

PROJECTS

E-Commerce Development Store [🔗](#)

Technologies: Nuxt 3, Apollo, GraphQL, Shopify API, Pinia

- **Built a full-featured eCommerce store** using Nuxt 3, integrated with the Shopify Storefront API, showcasing a wide range of products.
- **Implemented a dynamic cart system** allowing users to add, update, and remove items, with state management handled by Pinia.
- **Leveraged Apollo GraphQL** to efficiently fetch product data and manage mutations, improving data fetching and update performance.
- **Developed a variant selection feature** enabling users to choose product variants (e.g., size, color) directly on the product page, with automatic updates to the URL.
- **Designed and optimized the UI/UX** for a seamless shopping experience, including mobile responsiveness and accessibility features.
- **Handled data persistence** by saving the cart state across sessions, ensuring a consistent user experience even after page reloads.
- **Focused on error handling and debugging** by utilizing user-friendly error messages and feedback throughout the shopping process.
